

## Side application FRONT

It will be divided into four sections: (header, about, portfolio, contact).  
The header will consist of the menu, as well as the banner of the site.

The section (about) will summarize my career and my presentation.  
The section (portfolio) will contain the images of my projects made with love during my training.

The (section) contact will allow the user to be able to contact me  
And of course the footer who will have social links and general conditions.

the site will be a Onepage application (only one interactive page)  
The user will surf with an anchor slide system for a better experience

the technologies used for the front part are HTML, use for the content of the site,  
the CSS, which will take care of putting the content in place (positioning, colors

## Side application BACKOFFICE

It will communicate with different databases in order to modify the content  
from my app at any time.

Thus I will be able to add information, to delete them, to modify them to reach the mail received  
and the message posted while once connected in administrator mode

The tools, and technologies that will allow me to manage the back side are:  
php, ajax, mysql as well as wamp and phpMyadmin

To handle everything I will use the text editor Sublime text

Here I wish you a good and pleasant experience on my site.
